

PROTECTIVE FILTER TO A/C MACHINES

Protect your service station against metal shavings from failed A/C compressors by fitting a protective filter.

Even though a mechanical filter is integrated in many machines, the quantity of metal shavings may be so large that your service station requires extra service from your supplier, if you do not use these extra protective filters.

The filters are simply fitted with quick release couplings between the vehicle and the A/C service station, after which refrigerant is drained from the vehicle. Thus, you ensure that your machine is unharmed.

To R134a and R1234yf systems

Part No.	Name
602215	R134a protective filters to LP/HP
602220	R1234yf protective filters to LP/HP

Part No.	Name
602216	R134a protective filters to LP/HP
602221	R1234yf protective filters to LP/HP

Part No.	Name
602217	R134a protective filters to LP/HP
602222	R1234yf protective filters to LP/HP

Part No.	Name
602218	Filter
