

Easy Leak

LEAK DETECTOR

Detect cracks and chinks in no time

Detect leaks in:

- Vacuum hoses and pipe connectors
- Throttle valve housing and gaskets
- Vacuum containers
- Vacuum actuators
- Exhaust system
- Injector O-rings
- Intake manifold
- EGR valve

Easy Leak

LEAK DETECTOR

Smoke machine from Elektro Partner

Easy Leak detector is designed by the Elektro Partner hotline team. Built for the sole purpose of facilitating the job searching for leaks on the many and often branched systems in the car.

Search for leaks has increased with stricter demands regarding exhaust emissions. Even the smallest leak may have a big impact on the engine operation and the emission level. For today's cars with metres of hoses and pipes, traditional old-fashioned leak search using simple means is no longer sufficient.

The solution is Easy Leak detector, which can provide a dense and concentrated stream of smoke directly towards the spots suspected of leaks. Cracks and chinks in gaskets and castings or other connections cost garages and car owners a fortune each year, due to time spent on troubleshooting and unnecessarily replaced parts.

Easy Leak detector is particularly suitable for leak searching in low-pressure and vacuum systems such as:

Engine:

- Manifold system
- Exhaust system
- Crankcase vent
- Intake/air filter box
- Throttle valve housing

- Fuel tank ventilation system
- Intercooler system
- Vacuum system
- Brake booster

Bodywork:

- Bodywork joints
- Door sealing
- Window sealing
- Cable bushings

Fast and easy to handle

1. Connect the power
2. Turn on
3. Detect the leak

Most leaks are detected in less than 3 minutes.
