# LOW-PRESSURE CONTROL KIT

## **Low-pressure control kit**

Use this low-pressure control kit to exclude faults in the feed pressure of common rail systems, which have a pump in the tank - or the suction capacity of the high-pressure pump in systems without feed pump in the tank. If these measurements are not ok, all other measurements are unreliable and as a result, expensive components are replaced for no reason and valuable time is wasted.

The kit consists of 2 dial gauges, which provide measurements from 0 to 10 bars as well as a vacuum of -1 to 0 bars. The best-known quick release couplings and a pair of special pliers are included in the kit to make fitting quick and easy. In addition, there are universal couplings. Check the system for false air using the accompanying sight glass.

Part No. 490110
