High-pressure

BLOCKING ADAPTER KIT

A: Bosch CP1

B: Bosch CP3

C: Delphi DFP1 / DFP3

D: Denso HP3

E: Denso HP1 / HP2

F: Siemens DCP2

G: Siemens DCP1

I: Siemens DCP1 / DCP2

H: Siemens DCP1 / DCP2

Blocking adapter kit for use with the common rail high-pressure test kit

This blocking adapter kit for common rail pumps helps the user to determine whether the lack of pump pressure is caused by the regulator or the pump.

When you have stated that the pump pressure is too low, you simply replace the regulator using the correct blocking adaptor, which will make the diesel oil flow back into the fuel tank. If the pressure remains low, it is due to a faulty pump, and if not, the regulator does not work properly.

This kit should be used with the common rail high-pressure test kit JOCR1600M. The kit comes in a moulded suitcase.

Part No. JOCR1600FRN
